

Convex Optimization & Euclidean Distance Geometry

1	Overview	19
2	Convex geometry	33
2.1	Convex set	34
2.2	Vectorized-matrix inner product	45
2.3	Hulls	53
2.4	Halfspace, Hyperplane	61
2.5	Subspace representations	74
2.6	Extreme, Exposed	78
2.7	Cones	82
2.8	Cone boundary	91
2.9	Positive semidefinite (PSD) cone	98
2.10	Conic independence (c.i.)	121
2.11	When extreme means exposed	127
2.12	Convex polyhedra	127
2.13	Dual cone & generalized inequality	135
3	Geometry of convex functions	185
3.1	Convex function	186
3.2	Matrix-valued convex function	220
3.3	Quasiconvex	228
3.4	Salient properties	230

4	Semidefinite programming	231
4.1	Conic problem	232
4.2	Framework	240
4.3	Rank reduction	253
4.4	Rank-constrained semidefinite program	262
4.5	Constraining cardinality	279
4.6	Cardinality and rank constraint examples	288
4.7	Convex Iteration rank-1	316
5	Euclidean Distance Matrix	321
5.1	EDM	322
5.2	First metric properties	323
5.3	\exists fifth Euclidean metric property	323
5.4	EDM definition	328
5.5	Invariance	358
5.6	Injectivity of \mathbf{D} & unique reconstruction	363
5.7	Embedding in affine hull	369
5.8	Euclidean metric <i>versus</i> matrix criteria	374
5.9	Bridge: Convex polyhedra to EDMs	382
5.10	EDM-entry composition	389
5.11	EDM indefiniteness	392
5.12	List reconstruction	400
5.13	Reconstruction examples	404
5.14	Fifth property of Euclidean metric	411
6	Cone of distance matrices	421
6.1	Defining EDM cone	423
6.2	Polyhedral bounds	425
6.3	$\sqrt{\text{EDM}}$ cone is not convex	427
6.4	a geometry of completion	428
6.5	EDM definition in $\mathbf{11}^T$	434
6.6	Correspondence to PSD cone \mathbb{S}_+^{N-1}	442
6.7	Vectorization & projection interpretation	448
6.8	Dual EDM cone	453
6.9	Theorem of the alternative	467
6.10	postscript	469

7 Proximity problems	471
7.1 First prevalent problem:	479
7.2 Second prevalent problem:	490
7.3 Third prevalent problem:	501
7.4 Conclusion	511
A Linear algebra	513
A.1 Main-diagonal δ operator, λ , trace, vec	513
A.2 Semidefiniteness: domain of test	517
A.3 Proper statements	520
A.4 Schur complement	532
A.5 eigen decomposition	536
A.6 Singular value decomposition, SVD	539
A.7 Zeros	544
B Simple matrices	551
B.1 Rank-one matrix (dyad)	552
B.2 Doublet	557
B.3 Elementary matrix	558
B.4 Auxiliary V -matrices	560
B.5 Orthogonal matrix	565
C Some analytical optimal results	569
C.1 properties of infima	569
C.2 diagonal, trace, singular and eigen values	570
C.3 Orthogonal Procrustes problem	576
C.4 Two-sided orthogonal Procrustes	578
D Matrix calculus	583
D.1 Directional derivative, Taylor series	583
D.2 Tables of gradients and derivatives	604
E Projection	613
E.1 Idempotent matrices	617
E.2 $I - P$, Projection on algebraic complement	622
E.3 Symmetric idempotent matrices	623
E.4 Algebra of projection on affine subsets	628
E.5 Projection examples	629

12 CONVEX OPTIMIZATION & EUCLIDEAN DISTANCE GEOMETRY

E.6	Vectorization interpretation,	635
E.7	on vectorized matrices of higher rank	643
E.8	Range/Rowspace interpretation	647
E.9	Projection on convex set	647
E.10	Alternating projection	661
F	MATLAB programs	679
F.1	<code>isedm()</code>	679
F.2	conic independence, <code>conici()</code>	685
F.3	Map of the USA	688
F.4	Rank reduction subroutine, <code>RRf()</code>	693
F.5	Sturm's procedure	697
F.6	Convex Iteration demonstration	699
F.7	FAST MAX CUT	702
F.8	Signal dropout problem	704
G	Notation and a few definitions	707
	Bibliography	723
	Index	747

List of Figures

1	Overview	19
1	<i>Orion nebula</i>	20
2	Application of trilateration is localization	21
3	Molecular conformation	22
4	Face recognition	23
5	<i>Swiss roll</i>	24
6	USA map reconstruction	26
7	Honeycomb	27
8	Robotic vehicles	28
9	Reconstruction of David	32
10	David by distance geometry	32
2	Convex geometry	33
11	Slab	35
12	Intersection of line with boundary	38
13	Tangentials	41
14	Convex hull of a random list of points	53
15	Hulls	55
16	Two Fantopes	58
17	A simplicial cone	60
18	Hyperplane illustrated $\partial\mathcal{H}$ is a line partially bounding	62
19	Hyperplanes in \mathbb{R}^2	64
20	Affine independence	67
21	$\{z \in \mathcal{C} \mid a^T z = \kappa_i\}$	69
22	Hyperplane supporting closed set	70
23	Closed convex set illustrating exposed and extreme points	80

24	Two-dimensional nonconvex cone	83
25	Nonconvex cone made from lines	83
26	Nonconvex cone is convex cone boundary	84
27	Cone exterior is convex cone	84
28	Truncated nonconvex cone \mathcal{K}	85
29	Not a cone	86
30	Minimum element. Minimal element.	89
31	\mathcal{K} is a pointed polyhedral cone having empty interior	93
32	Exposed and extreme directions	97
33	Positive semidefinite cone	100
34	Convex Schur-form set	102
35	Projection of the PSD cone	105
36	Circular cone showing axis of revolution	110
37	Circular section	112
38	Polyhedral inscription	113
39	Conically (in)dependent vectors	122
40	Pointed six-faceted polyhedral cone and its dual	124
41	Minimal set of generators for halfspace about origin	126
42	Unit simplex	131
43	Two views of a simplicial cone and its dual	133
44	Two equivalent constructions of dual cone	137
45	Dual polyhedral cone construction by right angle	138
46	\mathcal{K} is a halfspace about the origin	139
47	Iconic primal and dual objective functions.	140
48	Orthogonal cones	145
49	<i>Blades</i> \mathcal{K} and \mathcal{K}^*	146
50	Shrouded polyhedral cone	156
51	Simplicial cone \mathcal{K} in \mathbb{R}^2 and its dual	161
52	Monotone nonnegative cone $\mathcal{K}_{\mathcal{M}+}$ and its dual	171
53	Monotone cone $\mathcal{K}_{\mathcal{M}}$ and its dual	173
54	Two views of monotone cone $\mathcal{K}_{\mathcal{M}}$ and its dual	174
55	First-order optimality condition	178
3 Geometry of convex functions		185
56	Convex functions having unique minimizer	187
57	Norm-1 ball	191
58	Affine function	198

59	Supremum of affine functions	200
60	Epigraph	200
61	Gradient in \mathbb{R}^2 evaluated on grid	208
62	Quadratic function convexity in terms of its gradient	213
63	Plausible contour plot	217
64	Iconic quasiconvex function	227
4	Semidefinite programming	231
65	Visualizing positive semidefinite cone in high dimension	235
66	2-lattice of sensors and anchors for localization example	268
67	3-lattice	269
68	4-lattice	270
69	5-lattice	271
70	ellipsoids of orientation and eccentricity	272
71	a 2-lattice solution for localization	277
72	a 3-lattice solution	277
73	a 4-lattice solution	278
74	a 5-lattice solution	278
75	Signal dropout	284
76	Signal dropout reconstruction	285
77	MAX CUT problem	298
78	Shepp-Logan phantom	303
79	MRI radial sampling pattern in Fourier domain	306
80	Aliased phantom	308
81	MIT logo	312
82	One-pixel camera	313
5	Euclidean Distance Matrix	321
83	Convex hull of three points	322
84	Complete <i>dimensionless EDM graph</i>	325
85	Fifth Euclidean metric property	327
86	Arbitrary hexagon in \mathbb{R}^3	336
87	Kissing number	338
88	<i>Trilateration</i>	342
89	This EDM graph provides unique isometric reconstruction	346
90	Two sensors \bullet and three anchors \circ	346
91	Two discrete linear trajectories of sensors	347

92	Coverage in cellular telephone network	350
93	Contours of equal signal power	350
94	Depiction of molecular conformation	352
95	Square diamond	361
96	Orthogonal complements in \mathbb{S}^N abstractly oriented	364
97	Elliptope \mathcal{E}^3	383
98	Elliptope \mathcal{E}^2 interior to \mathbb{S}_+^2	384
99	Smallest eigenvalue of $-V_{\mathcal{N}}^T D V_{\mathcal{N}}$	390
100	Some entrywise EDM compositions	390
101	Map of United States of America	403
102	Largest ten eigenvalues of $-V_{\mathcal{N}}^T O V_{\mathcal{N}}$	406
103	<i>Relative-angle inequality tetrahedron</i>	413
104	Nonsimplicial pyramid in \mathbb{R}^3	417
6	Cone of distance matrices	421
105	Relative boundary of cone of Euclidean distance matrices	424
106	Intersection of EDM cone with hyperplane	426
107	Neighborhood graph	429
108	<i>Trefoil knot</i> untied	431
109	<i>Trefoil ribbon</i>	433
110	Example of $V_{\mathcal{X}}$ selection to make an EDM	436
111	Vector $V_{\mathcal{X}}$ spirals	439
112	Three views of translated negated elliptope	446
113	Halfline \mathcal{T} on PSD cone boundary	450
114	Vectorization and projection interpretation example	451
115	Orthogonal complement of geometric center subspace	456
116	EDM cone construction by flipping PSD cone	457
117	Decomposing a member of polar EDM cone	462
118	Ordinary dual EDM cone projected on \mathbb{S}_h^3	468
7	Proximity problems	471
119	Pseudo-Venn diagram	474
120	Elbow placed in path of projection	475
121	Convex envelope	495

A	Linear algebra	513
122	Geometrical interpretation of full SVD	543
B	Simple matrices	551
123	Four fundamental subspaces of any dyad	553
124	Four fundamental subspaces of a doublet	557
125	Four fundamental subspaces of elementary matrix	558
126	Gimbal	567
D	Matrix calculus	583
127	Convex quadratic bowl in $\mathbb{R}^2 \times \mathbb{R}$	594
E	Projection	613
128	Action of the pseudoinverse	614
129	Nonorthogonal projection of $x \in \mathbb{R}^3$ on $\mathcal{R}(U) = \mathbb{R}^2$	620
130	Biorthogonal expansion of point $x \in \text{aff } \mathcal{K}$	631
131	Dual interpretation of projection on convex set	650
132	Projection product on convex set in subspace	659
133	von Neumann-style projection of point b	662
134	Alternating projection on two halfspaces	663
135	Distance, optimization, feasibility	665
136	Alternating projection on nonnegative orthant and hyperplane	668
137	Geometric convergence of iterates in norm	668
138	Distance between PSD cone and iterate in \mathcal{A}	673
139	Dykstra's alternating projection algorithm	674
140	Polyhedral normal cones	676
141	Normal cone to elliptope	677

List of Tables

2 Convex geometry	
Table 2.9.2.3.1 , rank <i>versus</i> dimension of \mathbb{S}_+^3 faces	107
Table 2.10.0.0.1 , maximum number of c.i. directions	122
Cone Table 1	168
Cone Table S	169
Cone Table A	170
Cone Table 1*	175
4 Semidefinite programming	
faces of \mathbb{S}_+^3 correspond to faces of \mathcal{S}_+^3	237
5 Euclidean Distance Matrix	
affine dimension in terms of rank <i>Précis</i> 5.7.2	372
B Simple matrices	
Auxiliary V -matrix Table B.4.4	564
D Matrix calculus	
Table D.2.1 , algebraic gradients and derivatives	605
Table D.2.2 , trace Kronecker gradients	606
Table D.2.3 , trace gradients and derivatives	607
Table D.2.4 , logarithmic determinant gradients, derivatives	609
Table D.2.5 , determinant gradients and derivatives	610
